

Have a small area is not a reason not to grow crops around the house. Many innovations have been developed, and give the ease to the houses that don't not have enough land to grow crops. One of those innovation is verticulture.

Verticulture is planting arranged vertically by using the help of pots, bamboo, PVC pipe, or unused objects such as ans and bottles along the walls of the house.

Some examples verticulture that can be made around the house are as follows picture:

Some types of plants that can be grown in vertical gardens are those that will grow in a container.
